DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

1. Claims 1 and 7-9 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention : claims recite "consisting essentially of" in a Markush group which make subject matter of claims 1 and 7-9 indefinite. See MPEP, paragraph 2173.05 (h) for proper language of Markush group. Correction is required. Language of Claims 1 and 7-9 will be understood as “ and (B) a thermoplastic resin selected from the group **consisting of** ” for examination purposes.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1 -10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Finerman et al.(US 6,288,171) in view of Sone et al.(US 6,255,416).

Regarding Claims 1 and 7-10 Finerman discloses thermoplastic elastomer composition as thermoplastic vulcanizates and articles from this composition (see

Art Unit: 1796

column 10, lines 15-20), comprising crystalline polypropylene and at least one conjugated diene based polymer (see column 1, lines 30 – 68).

Note, that Finerman does not disclose catalytic system for production of conjugated diene based polymer, but rather open to any polymers (homo- or copolymers) of conjugated diene monomers.

However, Sone teach that conjugated diene based polymers, obtained by specific catalytic system, comprising a rare earth element as neodymium (see column 4, lines 40-50) could have narrow molecular weight distribution, resulting to improved mechanical properties, processability and wear resistance.

Therefore, it would be obvious to one of ordinary skill to use conjugated diene based polymers, obtained per teaching of Sone in the composition disclosed by Finerman in order to improve improved mechanical properties, processability and wear resistance of the composition.

Regarding limitations of Claims 2 and 3 – see Sone column 2, lines 45 – 68 and column 3, lines 1-35 and see column 4, lines 40-50.

Regarding limitations of Claims 4 and 5 – see Sone, column 8, line 38 and column 3, lines 5-10.

Regarding Claims 7 -8 see Finerman: column 10, lines 3-14 and column 1, lines 65-68 and column 2, lines 1-2.

Regarding limitation of Claim 9 see Finerman: column 9, lines 50 – 64.
